TREV HOLBOURN

Software Engineer | Full-Stack Product & API Development | Observability & Internal Tooling

trevor.holbourn@gmail.com | +1 646 724 4305 | linkedin.com/in/trevor-smith-holbourn | Philly, PA

PROFESSIONAL SUMMARY

Engineer who ships and then operates what he ships. Built a fantasy baseball game on a Hono API and instrumented it like production, with Sentry, PostHog session replay, an admin health dashboard, and audited user proxying for debugging. At HackerRank, wrote CLI and Apps Script tooling that made solution delivery several times faster, and ran SSO, SCIM, and REST API integrations for Fortune 500 customers. Debugged distributed, containerized systems from the operational side at Datadog.

PROFESSIONAL EXPERIENCE

Senior Solution Engineer | HackerRank Philadelphia, PA (Remote) | January 2022 – Present

- Built CLI utilities and Google Sheets tooling (JavaScript, Apps Script, Ruby) that made solution delivery several times faster by automating customer account configuration.
- Configured SSO (SAML) and SCIM sign-up and provisioning integrations for enterprise customers on Okta and Azure AD/Entra ID, and onboarded customers onto REST APIs and ATS integrations.
- Served as primary technical contact for ~15 enterprise accounts including Google, Uber, and JPMC, translating production issues into actionable feature requests for teams that did not report to me.

Solution Engineer | Datadog New York, NY (Remote) | October 2020 – January 2022

- Supported observability across containerized and distributed infrastructure for pre-sales and post-sales customers.
- Triaged issues across customer stacks (logs, metrics, traces), reasoning systematically about failures in heterogeneous cloud environments.

Network Engineer | MMC Melbourne, AU / Hoboken, NJ | April 2011 – November 2019

- Built custom internal web applications that automated manual network operations, eliminating a significant class of configuration errors.
- Administered global enterprise networks across 200+ US offices and Asia-Pacific regions (Cisco IOS, BGP, EIGRP, HSRP, F5, SD-WAN).

PROJECTS, EDUCATION & TRAINING

- **Surreal Diamond** (personal project, 2026, ongoing): Fantasy baseball game on a Hono API and Vite client, deployed on Vercel. Instrumented for production observability with Sentry (server routes and browser errors) and PostHog (session replay, ~13 domain events keyed to user id), plus an admin health dashboard reporting daily actives and in-game economy counters and an HMAC-signed, audit-logged admin proxy for viewing the app as a specific user while debugging.
- **gro.lol** (personal project, 2026, live): Personal-homepage product built end-to-end (Rails API, React/Tailwind, Postgres), shipped to production in roughly a week of spare time using AI-assisted development (Claude Code).
- **The Squire | Indie Game Academy** (Nov 2022 – Mar 2023): Team Lead and Lead Developer for a 5-person team, architecting the core C#/Unity gameplay systems for a platformer that took second place in the program showcase. 20+ Unity, Godot, and web prototypes either side of it.
- **Software Engineering Immersive | General Assembly** (New York) Nov 2019 – Mar 2020.

TECHNICAL SKILLS

Languages: JavaScript (ES6+), Node.js, Ruby on Rails, C#, Apps Script, SQL. **Web & APIs:** React, REST APIs, Hono, Express, Vite, TailwindCSS, HTML5/CSS. **Identity & Auth:** SAML, SCIM, Okta, Azure AD/Entra ID, session and admin-proxy auth. **Database:** Postgres, MySQL, MongoDB. **Cloud & Observability:** Sentry, PostHog, Datadog (logs, metrics, traces), Vercel, AWS (basic), Azure (basic). **Networking:** Cisco IOS, BGP, F5, SD-WAN. **Testing:** Vitest, Playwright. **Tools & AI:** Git/GitHub, CLI tooling, AI-assisted development with Claude Code, daily LLM use for scripting and analysis.
